

MACS Middle School Curriculum Overview

Our Middle School Program uses the Abeka's Subject Distinctives

Reading- Selections are carefully chosen for interest, readability, theme, and values, with literary concepts and questions throughout to guide students in comprehension of reading material and in development of critical thinking skills, including application of valuable principles to their lives.

History- This approach results in edifying history texts that give students a historical perspective and instills within them a gratitude for God's hand in history and a desire to impact the future by fulfilling the Great Commission (Matt. 28:19-20).

Math- This solid foundation of mathematical concepts and problem-solving skills, enhanced with a biblical worldview, intentionally and naturally results in lifelong application.

Science/Health- Students are equipped to explore science from a biblical worldview while developing practical use of the scientific method and application of critical thinking skills.

English- Students are provided with examples of the very best literature of the ages, opportunities for the continual improvement of speaking and writing ability based on a strong grammatical foundation, and the development of individual discernment based on a biblical worldview.

Daily Bible teaching and weekly Chapel Service led by Pastor Zach Long

Middle School Program Benefits
